# ApnoMart Q2 2026 — Strategic Insights

## ApnoAI Final Project — Data Analytics Track

Analyst: [Your Name]  Date: 29 October 2026  Tool: Excel dashboard / Power BI-ready analysis

| Orders | Total Sales | Total Profit | Profit Margin |
|---|---|---|---|
| 1,200 | ■16,261,998.30 | ■4,419,736.17 | 27.18% |

## INSIGHT 1: Revenue Pattern

Furniture is the largest category by sales, contributing ■3,518,270 (21.6% of total sales). Electronics contributes ■2,957,520, while Office Supplies generates ■3,380,834.

**So what:** Sales are spread across categories, but Furniture is the leading revenue contributor. Keep inventory and availability aligned with demand while monitoring category-level profit.

## INSIGHT 2: Profitability Pattern

Central has the highest regional profit at ■943,678, while East has the highest regional sales at ■3,436,561 (East). North records ■2,979,834 in sales. Electronics has the lowest category margin (18.88%), compared with Office Supplies at 34.80%.

**So what:** Regional sales leadership and profit leadership are not identical. Compare product mix, discounts and costs by region before changing pricing.

## INSIGHT 3: Customer Behavior Pattern

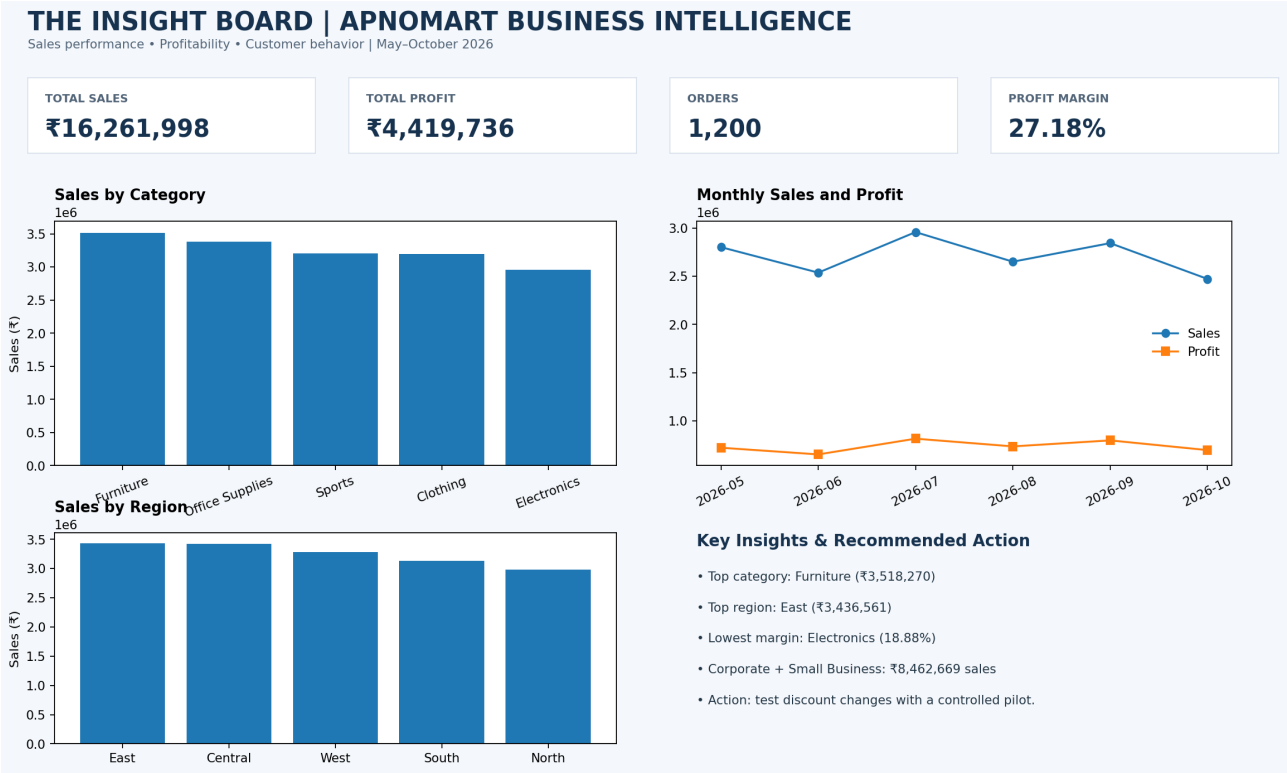

Corporate is the largest customer segment by sales at ■4,311,028 (26.5%). Small Business contributes ■4,151,641 (25.5%). Cash is the largest payment method by sales at ■3,574,077; UPI contributes ■3,347,484.

**So what:** Corporate and Small Business customers are important segments for retention and repeat-order campaigns. Keep multiple payment options available because customers use several methods.

## STRATEGIC RECOMMENDATION

Run a controlled next-quarter pilot to improve Electronics profitability: review product-level margin, supplier costs and discount bands, then test lower discounts on selected low-margin products against a control group. Track sales, profit and order volume before rolling out broadly. In parallel, test a repeat-order offer for Corporate and Small Business customers. No incremental profit forecast is stated because the dataset alone does not establish causal impact.

## DASHBOARD SCREENSHOT

Method note: Analysis uses 1,200 rows from the supplied CSV. Data dates run from May to October 2026, so the period is stated as May–October 2026 rather than strictly Q2. Overall margin = total profit ÷ total sales × 100.
